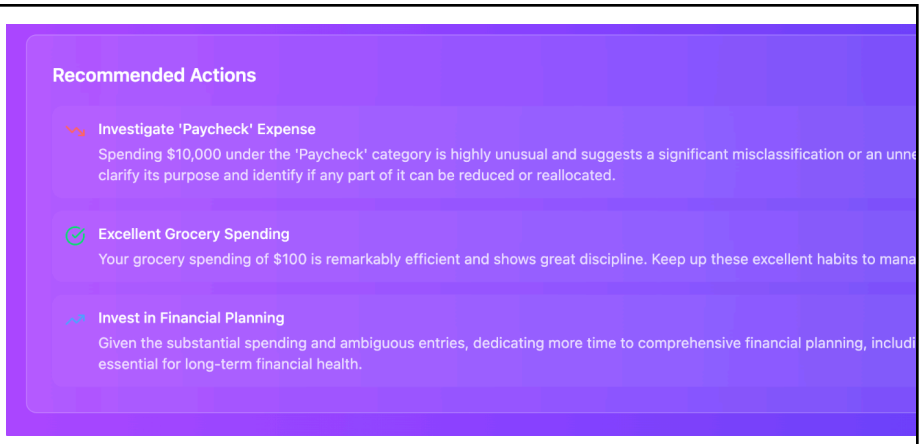
Budgetwise

Week 5 | 03/07/2026 - 03/13/2026

Leader: Casandra Marquez

Casandra Marquez Time Spent 12 Hours	Tasks completed: ● Created weekly report, created Jira stories, and assigned tasks ● Merged Jonathan's branch for the settings page and added backend logic in settings.ts to update user information ● Added backend logic for income tracking and updated the frontend so users can add either an expense or income with separate categories ● Merged MarceloMejia's expenses fix ● Merged Sophia's branch into front_back_merge ● Implemented a simple forgot password UI and added temporary backend logic to update a user's password until email verification is completed Planned tasks for next week: ● Work on reset password through Gmail ● Look into integrating a banking system to add expenses Issues or challenges: ● Midterms ● Merging multiple branches into one cohesive app ● Integrating backend logic into frontend pages
Sophia Chau Time Spent 11 Hours	Tasks Completed ● Updated project specs with color scheme and location of elements ● Researched what API to use for AI calls (can't do OpenAI bc paid) ● Implemented 3 recommendations AI with API calls to test Planned Tasks for Next Week ● Continue implementing AI features ● See if I can limit the amount of API calls to work under the limitations of a free account Issues or Challenges ● AI recommendations are having a hard time differentiating between income and expenses (screenshot below). Anyone know why this might be happening?

<table>
<tr>
<td></td>
<td>



<ul>
<li>Anticipated challenge = API calls are extremely limited for Gemini free version. I think we may need to limit our AI features for the future, as even testing only 1 time may exceed our limits for API calls. I will do more testing in the future to see what we can do as a workaround</li>
</ul>
</td>

<tr>
<td>Marcelo Mejia

Time Spent
7 hours</td>
<td>
Tasks Completed
<ul>
<li>The expenses page backend logic that allowed the user’s to add an income statement had been completed last week, so I added to the calendar page UI to show this.</li>
<li>Added UI functionctionality allowing users to edit their income and expenses to a different amount, date, description, category, etc.</li>
<li>Modified mock data to better fit the current scheme we have in the app, so that it can ported</li>
</ul>
personal_transactions_budgetwise_2025_2026.xlsx
<ul>
<li>Edited some elements of the Dashboard to match what was being displayed in the expenses page and calendar</li>
</ul>
Planned Tasks for Next Week
<ul>
<li>Last week I said I wanted to add a script /command for porting the</li>
</ul>
</td>

	mock data into the database upon startup (for testing purposes), but I wasn't able to get to it.. This will probably be something I do next. Issues or Challenges ● Completing the tasks for this week while having a lot of assignments and studying for midterm week. ● Sickness, not enough to stop working though. ● I had a small issue with prisma when I started working, but was able to get past it.
Jonathan Strong Time Spent 12 hours	Tasks Completed ● The dashboard bar chart was only displaying a label for every other bar rather than for each bar so I removed it for now. ● The expense categories did not match up with the budget creator categories causing some issues with the pie and bar chart ○ Changed it so that both expenses and budget creator had the same categories ● Created a basic settings page that displays currently signed in email and users name. Planned Tasks for Next Week ● Issues or Challenges ● Tried to get the bar chart to display label for each category but could not figure it out ● Some slight issue with adding the new page but was able to add it successfully
Haru Kimura Time Spent 12 hrs	Tasks Completed ● Implemented the forgot password frontend page UI with email input and reset request flow ● Styled the page to match the existing login page design system (card layout, icons, gradient buttons) ● Connected the Forgot Password link from the login page to the new page ● Updated the auth provider route guard so the forgot-password and reset-password pages are accessible without authentication ● Implemented the reset password page UI with password + confirm password validation ● Added form validation for password mismatch and minimum length. ● Added success and error UI states for the reset flow ● Structured both pages so they can easily connect to the backend endpoints once the password reset email service is implemented Planned Tasks for Next Week ● Connect the forgot password form to the backend endpoint for sending reset emails ● Connect the reset password form to the backend endpoint that

	verifies the reset token and updates the user's password ● Continue refining UI consistency across authentication pages Issues or Challenges ● Needed to update the authentication route guard so the forgot-password and reset-password pages could be accessed without being logged in ● Juggling between midterms and this project

Total Time Spent: 74 hours

Summary:

Implemented income and expense tracking, editable transactions, dashboard and calendar updates, a settings page for updating user information, and initial forgot password and reset password flows. AI recommendation features were prototyped, multiple branches were merged into a unified application, and the frontend and backend were further integrated.
